Course Information	
Comprehensive Course Description	The course will provide an overview on cell metabolism and biochemical pathways, covering primary, lipid and isoprenoid metabolism. This will be followed by an introduction of the concept of Metabolic Engineering, highlighting key factors that regulate natural and synthetic pathways. Examples for engineered pathways will be presented and discussed in depth. The course also includes practical introduction in metabolites analysis.
Course Description from Program Guide	This course provides in depth knowledge in major topics of plant biochemistry and an introduction to metabolic analysis.
Goals and Objectives	The student will get a deep understanding of key metabolic processes and a comprehensive overview on achievements and bottlenecks of metabolic engineering.
Required Knowledge	Profund basis knowledge of biochemistry and strong interest in metabolic processes.
Reference Texts	Reviews and primary literature will be assigned during the semester. For background on specific topics, the following books are recommended. Stephanopoulos, G.N., Aristidou, A.A., Nielsen, J. (2000). <i>Metabolic Engineering: Principles and Methodologies</i> . Academic Press. Del Carmen Cortassa, S., Aon, MA (2011) <i>An Introduction to Metabolic and Cellular Engineering</i> (2nd Edition). World Scientific. Berg, J.M., Tymoczko, J.L., Gregory J. Gatto Jr. G.J., Stryer, L. (2015) <i>Biochemistry</i> (8th Edition). Macmillan Learning Heldt H-W (2011) <i>Plant Biochemistry</i> . Fourth Edition. Elsevier Academic Press. Buchanan, B., Grussem, W., Jones, R. (2015) <i>Biochemistry & Molecular Biology of Plants</i> , John Wiley & Sons.
