

## Course Syllabus: Uncertainty Quantification - AMCS 350

<b>Division</b>	Computer, Electrical and Mathematical Sciences & Engineering
<b>Course Number</b>	AMCS 350
<b>Course Title</b>	Uncertainty Quantification
<b>Academic Semester</b>	Spring
<b>Academic Year</b>	2017/2018
<b>Semester Start Date</b>	01/28/2018
<b>Semester End Date</b>	05/24/2018
<b>Class Schedule</b> (Days & Time)	09:00 AM - 10:30 AM   Tue Thu

Instructor(s)				
Name	Email	Phone	Office Location	Office Hours
Omar Mohamad Knio	Omar.Knio@kaust.edu.sa	+966128080311		By appointment as needed. Office location: Building 1, Room 0113.

Teaching Assistant(s)	
Name	Email

Course Information	
<b>Comprehensive Course Description</b>	<p>This course is an advanced introduction to uncertainty propagation and quantification in model-based simulations. Examples are drawn from a variety of engineering and science applications, emphasizing systems governed by ordinary or partial differential equations. The course will emphasize a probabilistic framework, and will survey classical and modern approaches, including sampling methods and techniques based on functional approximations.</p> <p>We will start with an overview of the goals of uncertainty quantification (UQ), and the practical role of UQ in design and decision making. We will review fundamental results from spectral approximation theory, and outline basic concepts from probability theory. Based on these reviews, we will conduct an in-depth exploration of uncertainty propagation methods based on various functional approximations. We will conclude with discussion of several topics pertaining to sensitivity analysis, measure transforms, noisy systems, Bayesian inference, and model calibration.</p>
<b>Course Description from Program Guide</b>	<p>This course is an advanced introduction to uncertainty propagation and quantification in model-based simulations. Examples are drawn from a variety of engineering and science applications, emphasizing systems governed by ordinary or partial differential equations. The course will emphasize a probabilistic framework, and will survey classical and modern approaches, including sampling methods and techniques based on functional approximations.</p>
<b>Goals and Objectives</b>	<p>Students completing this course will be able to: (1) apply classical and modern methods for propagating parametric uncertainties in computational simulations in problems governed by ordinary and differential equations, (2) quantify uncertainties in predicted outputs; (3) identify dominant sources, (4) identify courses for uncertainty reduction, and (5) apply UQ concepts to problems of inference or inverse design.</p>
<b>Required Knowledge</b>	<p>Basic knowledge of ordinary and partial differential equations. Computer programming using MATLAB, C, FORTRAN, and/or PYTHON.</p>

<b>Reference Texts</b>	<b>Required Text:</b> <p>-O.P. Le Maître and O. Knio, Spectral Methods for Uncertainty Quantification, Springer, 2010 (available online (<a href="http://library.kaust.edu.sa">http://library.kaust.edu.sa</a>))</p> <b>Reference Texts:</b> <p>-Canuto, M.Y. Hussaini, A. Quarteroni, and T.A. Zang, Spectral Methods, Springer, 2006 (available online).</p> <p>-D.S. Sivia, Data Analysis, Oxford, 2006.</p> <p>-J.S. Liu, Monte Carlo Strategies in Scientific Computing, Springer, 2008.</p>
<b>Method of evaluation</b>	<b>100.00%</b> - Homework /Assignments
<b>Nature of the assignments</b>	Assignments will involve analytical work, computer programming, and implementation of open source software.
<b>Course Policies</b>	Course materials and homework submission will be communicated via email.
<b>Additional Information</b>	

## Tentative Course Schedule

*(Time, topic/emphasis & resources)*

<b>Week</b>	<b>Lectures</b>	<b>Topic</b>
1	Tue 01/30/2018 Thu 02/01/2018	Introduction: Role and Goal of UQ Spectral approximation
2	Tue 02/06/2018 Thu 02/08/2018	Spectral approximation
3	Tue 02/13/2018 Thu 02/15/2018	Review of basic concepts from probability theory
4	Tue 02/20/2018 Thu 02/22/2018	Uncertainty propagation based on functional approximation
5	Tue 02/27/2018 Thu 03/01/2018	Uncertainty propagation based on functional approximation
6	Tue 03/06/2018 Thu 03/08/2018	Uncertainty propagation based on functional approximation
7	Tue 03/13/2018 Thu 03/15/2018	Uncertainty propagation based on functional approximation
8	Tue 03/20/2018 Thu 03/22/2018	Uncertainty propagation based on functional approximation
9	Tue 03/27/2018 Thu 03/29/2018	Uncertainty propagation based on functional approximation
10	Tue 04/03/2018 Thu 04/05/2018	Uncertainty propagation based on functional approximation
11	Tue 04/10/2018 Thu 04/12/2018	Break
12	Tue 04/17/2018 Thu 04/19/2018	Sensitivity analysis
13	Tue 04/24/2018 Thu 04/26/2018	Bayesian inference
14	Tue 05/01/2018 Thu 05/03/2018	Bayesian inference
15	Tue 05/08/2018 Thu 05/10/2018	Measure transforms
16	Tue 05/15/2018 Thu 05/17/2018	Noisy systems
17	Tue 05/22/2018 Thu 05/24/2018	Noisy systems
18
