

## Course Syllabus: Linear Algebra - AMCS 151

<b>Division</b>	Computer, Electrical and Mathematical Sciences & Engineering
<b>Course Number</b>	AMCS 151
<b>Course Title</b>	Linear Algebra
<b>Academic Semester</b>	Fall
<b>Academic Year</b>	2018/2019
<b>Semester Start Date</b>	08/26/2018
<b>Semester End Date</b>	12/11/2018
<b>Class Schedule</b> (Days & Time)	04:00 PM - 05:30 PM   Mon Thu

Instructor(s)

Course Information	
<b>Comprehensive Course Description</b>	<p>Vectors and Matrices: Vectors and Linear Combinations. Dot Product and Distance. Matrices.</p> <p>Systems of Linear Equations: Elimination. Matrix Operations. Inverse Matrices. LU Factorization. Transposes and Permutations.</p> <p>Vector Spaces and Subspaces: Spaces of Vectors. Nullspace. Rank and Row Reduced Form. Complete Solution of <math>Ax=b</math>. Independence, Basis and Dimension. Fundamental Subspaces.</p> <p>Orthogonality: Orthogonality and Projections. Least Squares. Orthogonal Basis and Gram-Schmidt.</p> <p>Determinants: Properties of Determinants. Cofactors. Cramer's Rule and Cross Product.</p> <p>Eigenvalues and Eigenvectors: Eigenvalues. Diagonalization of a Matrix. Symmetric Matrices. Positive Definite Matrices. Similar Matrices. Singular Value Decomposition.</p> <p>Applications to Engineering: differential equations, graphs and networks, linear programming.</p>
<b>Course Description from Program Guide</b>	<p>This is a basic subject on matrix theory and linear algebra. Emphasis is given to topics that will be useful in other disciplines, including systems of equations, introduction to vector spaces, basis and dimension, rank of a matrix, determinants, eigenvalues and diagonalization, similarity, and positive definite matrices.</p> <p>Applications. Orthogonal and unitary matrices and transformations. Orthogonal projections, Gram-Schmidt procedure.</p>
<b>Goals and Objectives</b>	The goal of the course is to provide the students with the fundamentals of linear algebra and its applications to engineering.
<b>Required Knowledge</b>	Pre-Calculus.
<b>Reference Texts</b>	<p>Introduction to Linear Algebra, 5th International Edition, 2013, Author: Gilbert Strang, Wellesley-Cambridge Press.</p> <p>Location: main library, Call no.: QA184.S78 2009</p>

<b>Method of evaluation</b>	<p>40.00% - Final exam  45.00% - Quiz(zes)  15.00% - Homework /Assignments</p>
<b>Nature of the assignments</b>	<p>There are three components to the final grade: 6 quizzes, problem sets and final exam. The contribution of each component to the course grade is as follows:  Quizzes -- 45%  Problem Sets -- 15%  Final Exam -- 40%</p> <p>The 6 quizzes have a duration of 30 minutes each and will be held at the beginning of the following lectures: Sept 13, 27; Oct 18; Nov 1, 15, 29. Only the 5 best quiz grades will be averaged to enter the final grade. The final exam will be held during lecture time on December, 3.</p> <p>Quizzes and final exam are closed book and closed notes.  Problem sets will be given as homework. The quizzes will be based on these sets.  The grading is given in a Satisfactory(S)/Unsatisfactory(U) system. To pass the course the final grade should be at least 70%.</p>
<b>Course Policies</b>	<p>Students are expected to attend all classes, quizzes and final exam. Absences should be notified in advance and should comply with the university policies.</p> <p>Students that do not show up for a quiz or for the exam should expect a zero in that assessment except for exceptional cases (such as sick leave or other university/advisor approved activities).</p> <p>The students can discuss the homework problems in group but should work out the details individually. Identical homework will be considered as plagiarism and will be marked as zero. Late homework will not be graded except for exceptional cases (such as sick leave or other university/advisor approved activities).</p> <p>No calculators, mobile or laptop allowed during evaluations.</p>
<b>Additional Information</b>	

## Tentative Course Schedule

*(Time, topic/emphasis & resources)*

Week	Lectures	Topic
1	Mon 08/27/2018 Thu 08/30/2018	Course and lecturer introduction. Vectors and linear combinations. The geometry of linear equations. Elimination.
2	Mon 09/03/2018 Thu 09/06/2018	Multiplication of matrices. Inverses. LU decomposition.
3	Mon 09/10/2018 Thu 09/13/2018	Transposes, symmetric matrices. Permutations and $PU=LA$ . Quiz 1. Vector spaces.
4	Mon 09/17/2018 Thu 09/20/2018	Column space and nullspace of a matrix. Solving $Ax=0$ .
5	Mon 09/24/2018 Thu 09/27/2018	Solving $Ax=b$ . Quiz 2. Linear independence, spanning a vector space, basis and dimension.
6	Mon 10/01/2018 Thu 10/04/2018	The four fundamental subspaces. Orthogonal vectors and subspaces.
7	Mon 10/08/2018 Thu 10/11/2018	Projections onto subspaces. Projection matrices and least squares.
8	Mon 10/15/2018 Thu 10/18/2018	Orthogonal matrices and Gram-Schmidt. Quiz 3. The properties of determinants.
9	Mon 10/22/2018 Thu 10/25/2018	Determinant formulae and cofactors. Applications of determinants.
10	Mon 10/29/2018 Thu 11/01/2018	Mid-semester break. Quiz 4. Eigenvalues and eigenvectors.
11	Mon 11/05/2018 Thu 11/08/2018	Diagonalization and powers of a matrix. Differential equations and exponential of a matrix.
12	Mon 11/12/2018 Thu 11/15/2018	Symmetric matrices. Quiz 5. Positive definite matrices and similar matrices.
13	Mon 11/19/2018 Thu 11/22/2018	Graphs and networks. Markov matrices, matrices in Engineering and Economics.
14	Mon 11/26/2018 Thu 11/29/2018	Linear programming. Quiz 6. Review.
15	Mon 12/03/2018 Thu 12/06/2018	Final Exam.
16	Mon 12/10/2018	.
