

## Course Syllabus: Applied Quantum Mechanics - MSE 227

<b>Division</b>	Physical Science and Engineering Division
<b>Course Number</b>	MSE 227
<b>Course Title</b>	Applied Quantum Mechanics
<b>Academic Semester</b>	Fall
<b>Academic Year</b>	2018/2019
<b>Semester Start Date</b>	08/26/2018
<b>Semester End Date</b>	12/11/2018
<b>Class Schedule</b> (Days & Time)	04:00 PM - 05:30 PM   Sun Wed

Instructor(s)

Stefaan De Wolf	stefaan.dewolf@kaust.edu.sa	+966128084849	3237, 5, Al-Kindi (bldg. 5)	Upon appointment

Teaching Assistant(s)	
Name	Email

Course Information	
<b>Comprehensive Course Description</b>	This course starts with a very brief overview of Newtonian Mechanics, electromagnetism and special relativity theory. Next, we dive into the wave-particle duality, the wave function and the Schrodinger wave equation to calculate it. This is followed by discussions of the statistical interpretation of the wave function, probability, normalization, momentum and Heisenberg's uncertainty principle. We then discuss stationary states, and study the infinite square potential well to understand their properties. A following section discusses the quantum-mechanical harmonic oscillator, its physical relevance, and two different methods to solve this problem, namely the algebraic method, using operators, and the analytical method. We then focus on the quantum-mechanical description of the free particle, and its scattering and tunneling properties when interacting with potential walls and barriers. We also discuss the properties of wave packets. Next, we study the case of the Dirac delta-function potential, and discuss in broader context bound and scattering states, with specific attention to the finite square potential well. So far we mainly dealt with one dimensional cases. A next section discusses the important case of spherically symmetric potentials in three dimensions. With this knowledge, we are ready to fully solve the hydrogen atom problem, and briefly discuss corrections to our results. With the understanding of the quantum numbers for this atom, we will then discuss the periodic table. A final section will discuss the formation of energy bands in periodic potentials such as crystals.
<b>Course Description from Program Guide</b>	Introduction to non-relativistic quantum mechanics. Summary of classical mechanics and electrodynamics. Postulates of quantum mechanics, wave functions, operator formalism and Dirac notation. Stationary state problems, including quantum wells and tunneling. Harmonic oscillator. Time evolution. Approximation methods for time-independent as well as time-dependent interactions.
<b>Goals and Objectives</b>	<ul style="list-style-type: none"> <li>-Objective 1: The student will be able to formulate and explain the fundamental concepts of Quantum Mechanics.</li> <li>-Objective 2: The student will learn to solve Schrodinger equation to obtain eigenvectors and energies.</li> <li>-Objective 3: The student will learn to calculate and describe the propagation of a particle in a simple, 1 dimensional potential.</li> </ul>
<b>Required Knowledge</b>	The student should know about Fourier transforms, Taylor series expansion, basic matrix manipulation, 1st and 2nd order differential equations, as well as standard classical mechanics and electrostatics.

<b>Reference Texts</b>	<p>-David J. Griffiths and Darrell F. Schroeter, Introduction to Quantum Mechanics, Third Edition, Cambridge University Press, 2018, ISBN-13: 978-1-107-189638</p> <p>-Herbert Kroemer, Quantum Mechanics for Engineering, Materials Science and Applied Physics, Prentice Hall, 1994. ISBN 0-13-747098-3</p>
<b>Method of evaluation</b>	<p><b>20.00%</b> - Final exam  <b>20.00%</b> - Quiz(zes)  <b>20.00%</b> - Presentation  <b>20.00%</b> - Midterm exam  <b>20.00%</b> - Homework /Assignments</p>
<b>Nature of the assignments</b>	<p>-There will be regularly a short (written) Quiz on Sunday, covering last weeks material: 20% of total grade</p> <p>-There will be four times a homework assignment, each 5 % of total grade. Each homework consists of sets of problems. Students are usually given two weeks to solve these problems and hand over a written report.</p> <p>-There will be 1 presentation project (12 min talk): 20% of total grade</p>
<b>Course Policies</b>	<p>The students are expected to attend all classes and to hand in all homework on time. No deadline extension will be granted.</p>
<b>Additional Information</b>	

## Tentative Course Schedule

*(Time, topic/emphasis & resources)*

Week	Lectures	Topic
1	Sun 08/26/2018	Introduction - Newton - Maxwell - Einstein
1	Wed 08/29/2018	Wave-particle duality – Schrodinger wave equation [Presentation assignment]
2	Sun 09/02/2018	Statistical interpretation – Probability – Normalization
2	Wed 09/05/2018	Momentum – Uncertainty Principle [HW1]
3	Sun 09/09/2018	Stationary states
3	Wed 09/12/2018	Infinite square well
4	Sun 09/16/2018	Harmonic oscillator
4	Wed 09/19/2018	Harmonic oscillator – Algebraic method [HW2]
5	Sun 09/23/2018	No Class Saudi National Day
5	Wed 09/26/2018	Harmonic oscillator – Analytical method
6	Sun 09/30/2018	Free particle
6	Wed 10/03/2018	Free particle: Scattering and Tunneling [HW3]
7	Sun 10/07/2018	Free particle: Wave packet
7	Wed 10/10/2018	Repetition
8	Sun 10/14/2018	Midterm Exam
8	Wed 10/17/2018	Delta-function potential [HW4]
9	Sun 10/21/2018	Bound and scattering states
9	Wed 10/24/2018	Bound and scattering states
10	Sun 10/28/2018	Presentation projects
10	Wed 10/31/2018	Spherically symmetric potentials [HW5]
11	Sun 11/04/2018	Spherically symmetric potentials - Spherical Harmonics
11	Wed 11/07/2018	Spherically symmetric potentials - Angular Momentum
12	Sun 11/11/2018	Hydrogen Atom
12	Wed 11/14/2018	Hydrogen Atom - Ground State and Energy Eigenvalues
13	Sun 11/18/2018	Hydrogen Atom - Corrections
13	Wed 11/21/2018	Atoms - Periodic table
14	Sun 11/25/2018	Atoms - Periodic table
14	Wed 11/28/2018	Energy bands in periodic potentials
15	Sun 12/02/2018	Energy bands in periodic potentials
15	Wed 12/05/2018	Repetition
16	Sun 12/09/2018	Final Exam
