King Abdullah University of
Science and Technology

Course Syllabus: Contemporary Topic in Numerical Analysis - AMCS 394D

Division	Computer, Electrical and Mathematical Sciences & Engineering
Course Number	AMCS 394D
Course Title	Contemporary Topic in Numerical Analysis
Academic Semester	Fall
Academic Year	2019/2020
Semester Start Date	08/25/2019
Semester End Date	12/10/2019
Class Schedule (Days & Time)	04:00 PM - 05:30 PM | Mon Wed

Instructor(s)

Name	Email	Phone	Office Location	Office Hours
Gabriel Christoph Wittum	gabriel.wittum@kaust.edu.sa	+966128080387	0117, 1, Al-Khawarizmi (bldg. 1)	My office hours will be the time after the lectures, Mon, Wed 5:45 - 6:45 pm. My office is B1, Rm 0117.

Teaching Assistant(s)

Name	Email
Dmitry Logashenko	Dmitry.Logashenko@kaust.edu.sa

Course Information

Comprehensive Course Description	Fast Solvers for Large Systems of Equations Solving systems of algebraic equations is a core task in the numerics of partial differential equations (PDE). After discretising the PDE with a grid method like finite volumes, finite elements or finite differences, we finally obtain a system of algebraic equations, which is typically sparse and very large. The largest systems currently solved contain up to 1012 unknowns. To solve such large sparse systems, specialised algorithms are necessary. Since these algorithms are in the core of a lot of simulation programs and all other parts are usually O(n), they are setting the final complexity of a simulation. We introduce linear iterative methods and discuss their properties inparticular w.r.t. convergence and complexity issues. We then develop multi-grid methods and discuss their main properties. Issues of convergence and complexity are discussed in detail. We further analyse robustness for singularaly perturbed problems and generalise multi-grid methods to solving systems of PDE. We introduce multi-grid methods for non-linear and heterogenous problems and introduce Algebraic Multigrid Methods (AMG).
Course Description from Program Guide	
Goals and Objectives	The students learn to analyse linear iterative methods and to develop and compose multi-grid methods as solvers for large sparse systems of algebraic equations. They learn how to obtain robust convergence and how to generalise multi grid to systems of pde. They further learn the basics of Algebraic Multi-Grid Methods.
Required Knowledge	Basic mathematics courses on Analysis and Linear Algebra. Courses on PDE and numerics are useful, but nor required. Programming knowledge (C++) is advantageous.

Reference Texts	W Hackbusch: Multi-Grid Methods and Applications, Springer, 1985 G. Wittum: Multi-Grid Methods – an Introduction, manuscript
Method of evaluation	**50.00**% - Final exam **50.00**% - Homework /Assignments
Nature of the assignments	Homework, exercises, programming tasks
Course Policies	as usual
Additional Information	

Tentative Course Schedule

(Time, topic/emphasis & resources)

Week	Lectures	Topic
1	Mon 08/26/2019 Wed 08/28/2019	1. Introduction 1.1 A model problem: A box method 1.2 Iterative methods
2	Mon 09/02/2019 Wed 09/04/2019	1.3 Convergence of Iterative Method: M-Matrices and Regular Spittings
3	Mon 09/09/2019 Wed 09/11/2019	1.4 A Non-Linear Iteration 1.5 Complextiy Issues
4	Mon 09/16/2019 Wed 09/18/2019	2. A Two-Grid Method 2.1 The Smoothing Property of Linear Iterations 2.2 The Algorithm
5	Mon 09/23/2019 Wed 09/25/2019	Saudi National Day
6	Mon 09/30/2019 Wed 10/02/2019	3.2 Grid Transfers 3.3 The Coarse-Grid Operator
7	Mon 10/07/2019 Wed 10/09/2019	4. Multi-Grid Convergence 4.1 The Two-Grid Method 4.1.1 The Smoothing Property
8	Mon 10/14/2019 Wed 10/16/2019	4.1.2 The Approximation Property
9	Mon 10/21/2019 Wed 10/23/2019	4.2 The Multi-Grid Method 5. Non-Linear Multi-Grid Methods 5.1 Directly non-linear multi-grid methods 5.2 Newton Multi-Grid Methods
10	Mon 10/28/2019 Wed 10/30/2019	Mid-semester break
11	Mon 11/04/2019 Wed 11/06/2019	6.1. Multigrid Methods for singular problems
12	Mon 11/11/2019 Wed 11/13/2019	6.2. Multi-Grid methods for eigenvalue problems
13	Mon 11/18/2019 Wed 11/20/2019	7. Algebraic Multi-Grid
14	Mon 11/25/2019 Wed 11/27/2019	8. Filtering Decompositions
15	Mon 12/02/2019 Wed 12/04/2019	9. Filtering Algebraic Multi-Grid
16	Mon 12/09/2019	Exams
